Professional Summary

Results-driven Android Developer with 4+ years of experience building scalable, high-performance mobile applications using Kotlin, Jetpack Compose, and MVVM/Clean Architecture. Delivered production-grade applications for enterprise banking clients (IDBI Bank, Federal Bank), with end-to-end ownership from API integration to CI/CD release. Focused on crash reduction, performance optimization, and clean, testable code.

Technical Skills

Languages: Kotlin (Primary), Java, XML, SQL

Android Development: Android SDK, Jetpack (ViewModel, LiveData, Room, Navigation, WorkManager, DataStore, Paging 3)

UI/UX: Jetpack Compose, Material Design 3, ConstraintLayout, RecyclerView, ViewBinding

Architecture: MVVM, Clean Architecture, Repository Pattern, Hilt/Dagger 2

Networking & Async: Retrofit, OkHttp, REST APIs, Kotlin Coroutines, StateFlow

Firebase: Firestore, Realtime Database, Authentication, FCM, Crashlytics, Analytics

Tools & CI/CD: Android Studio, Git, GitHub Actions, GitLab CI, Gradle, Figma, Postman

Testing: JUnit, Mockito (unit tests), Espresso (UI tests), Firebase Test Lab

Backend & Database (self-learning): Ktor (REST API development), PostgreSQL, Supabase

Work Experience

Senior Technical Associate — Android Developer

Atyati Technologies Pvt. Ltd., Bengaluru | Nov 2022 – Present

Enterprise banking applications for institutions such as IDBI Bank and Federal Bank.

- Developed secure, scalable Android applications for loan processing and financial workflows
- Implemented MVVM architecture using Kotlin, LiveData, StateFlow, ViewModel, and Room
- Migrated select screens from XML/ViewBinding to Jetpack Compose, improving UI development speed and reducing boilerplate
- Integrated REST APIs using Retrofit for real-time backend communication
- Built and maintained GitHub Actions and GitLab CI pipelines for automated builds and release tagging, reducing manual release effort by roughly half
- Wrote unit tests (JUnit, Mockito) and UI tests (Espresso) to safeguard critical workflows against regressions
- Built user-friendly interfaces following Material Design guidelines
- Managed third-party SDK integration and Gradle dependency configuration across applications
- Used Firebase services (Crashlytics, Analytics) to monitor app stability and improve performance
- Participated in sprint planning, monthly team syncs, and code review cycles to ensure timely delivery
- Collaborated with backend developers, QA testers, product managers, and designers to deliver features

Key Projects

IDBI LOS — Loan Origination System

Kotlin, MVVM, Retrofit, Room, LiveData, Firebase Crashlytics

- Developed a Loan Origination System as part of a 2-member team, streamlining loan application, approval workflows, and document management
- Designed a scalable MVVM architecture and integrated secure APIs for real-time loan processing
- Reduced crash rate from 50% to 10% of affected sessions by monitoring and resolving issues via Firebase Crashlytics
- Deployed for internal banking staff operations

IDBI SHG — Self Help Group App

Java, Kotlin, MVVM, Retrofit, LiveData, Firebase Crashlytics

- Implemented hardware-level integrations — Bluetooth device communication, biometric (fingerprint) authentication, and thermal printer connectivity — for field-deployed banking hardware
- Built a financial tracking system for self-help groups, managing member contributions, loans, and reporting
- Integrated backend APIs for real-time synchronization and delivered a production-ready financial management app

Federal MSME

Java, Kotlin, MVVM, Room, SQLite, StateFlow, Firebase

- Developed micro-loan applications with an offline-first architecture using Room & SQLite, supporting uninterrupted usage in low-network branch environments
- Reduced loan processing screen load time by 40% by introducing a Room + SQLite caching layer to avoid redundant network calls
- Contributed to UI/UX improvements based on stakeholder and user feedback, making workflows more intuitive

Device Info App

Personal project — Published on Google Play

Link: Google Play – Device Content App

- Built and published an Android device-information app displaying hardware specs, OS version, and system features
- Implemented a clean, responsive UI using Material Design components and retrieved real-time device data via Android system APIs
- Handled the full end-to-end app development and release process independently, from build to Play Store deployment

---

Education

B.Tech in Electronics & Communication Engineering

Pace Institute of Technology and Sciences | 2016 – 2021
